

App Summary: NinjaTrader ES Strategy Repo

Based on repo evidence in ESStructureAnchorAVWAP.cs, ESVwapLite.cs, CHANGES.md, and CODE_REVIEW_ESStructureAnchorAVWAP.md

WHAT IT IS

This repo contains 54 NinjaTrader 8 Strategy scripts for futures trading.
Its clearest current focus is ESStructureAnchorAVWAP, plus a lighter ESVwapLite variant.

WHO IT'S FOR

Primary persona explicitly named in repo: Not found in repo.
Best repo-based fit: ES futures traders and NinjaTrader strategy builders using rule-based VWAP/AVWAP systems.

WHAT IT DOES

- Ships 54 custom strategies spanning AVWAP/VWAP, pivots, opening range, EMA pullbacks, and session-level pullbacks.
- Uses ESStructureAnchorAVWAP for structure anchors, regime gates, and risk-first daily controls.
- Combines HOD/LOD, structural overrides, impulse-origin anchors, session VWAP, and WTD AVWAP anchors.
- Tracks WTD AVWAP from Sunday 17:00 CT with a running accumulator beyond the 256-bar lookback limit.
- Applies ATR/time-window/gap-day filters plus caps for opportunities, consecutive losses, daily R, and per-trade risk.
- Places bracket orders, moves stops to breakeven at 1R, logs MFE/MAE, and supports chart overlays plus Q/A/C manual hotkeys.

HOW IT WORKS

Bars, volume, and trading-hours data feed NinjaTrader strategy lifecycle methods.
OnStateChange loads ATR, EMA, SMA, ADX, PriorDayOHLC, time-zone handling, and manual AVWAP2 anchors.
OnBarUpdate resets session state, updates daily extremes and weekly accumulators, then builds active anchors.
Anchor output flows through regime/risk gates, then into EnterLong/EnterShort with SetStopLoss/SetProfitTarget.
OnExecutionUpdate records realized R, MFE/MAE, and chart/log telemetry for monitoring.

HOW TO RUN

1. Use NinjaTrader 8 / NinjaScript; CHANGES.md explicitly notes NinjaTrader 8 on .NET Framework 4.8.
2. Load a strategy file such as ESStructureAnchorAVWAP.cs or ESVwapLite.cs into NinjaTrader and compile it.
3. Run it on ES data with at least 50 bars of history; repo review references ES 2-minute bars as the baseline.
4. Configure anchor/risk parameters and optional chart or log toggles in the strategy properties.
5. Exact import path, required data connection, and sample workspace/template: Not found in repo.
